

The Services You Want, The Experience You Need

Construction Management Services

Sali Group professionals have extensive experience in the management of process engineering maintenance and construction, providing customers turnkey construction management from concept/planning and design through construction and operation.

Our construction management expertise ranges from complex piping systems to major facility expansions and expedited repair and return of damaged equipment to service.

Our key services in construction management are to provide our customers with comprehensive design and build services with onsite representation throughout the project cycle. We have the know-how to deliver efficient, sound facilities, providing you with long-term fiscal strength and growth.

Sali Group delivers:

- Management of Permit Process
- Plan Preparation and Constructability Analysis
- Material and Equipment Procurement
- Construction Project Management
- Trade Contractor Pre-qualification and Contracting
- Project Scheduling and Cost Management
- Construction Management Teams

A Team Built on Experience

At Sali Group, we understand the rigors of Industrial Construction. Each member of our construction team has more than 10 years of experience in Industrial facilities design and/or construction. Our staff participates in all phases of

project construction, starting with value engineering and constructability reviews through system commissioning. Our team of specialists is adept at managing designs, construction and schedule around ongoing operations to minimize lost production.

Our years of experience in the industry have led to established relationships with many contractors, trades, and equipment suppliers.

Why Sali Group?

Confidence. Sali Group gives you the freedom to focus on your business knowing that your capital investments will be constructed and commissioned under expert guidance – a real advantage. Unlike many companies in the industry who provide construction representatives with less than three years' experience, our staff bring more than 10 years' of experience to your project and are trained in construction industry practices that make a difference in the project outcome. These include training programs that are in accordance with:

- The Construction Specifications Institute (CSI) 
- Occupational Safety and Health Act (OSHA) 

The Sali Difference

- Each project is assigned a licensed engineer and/or licensed contractor as the leader.
- Each on-site manager is equipped with a laptop computer, AutoCAD and MS Office suite, as well as MS Project
- Daily electronic construction reports, including photos and /or video.
- Project closeout reports, including contract documents, photos, and electronic as-built drawings are provided at the end of each project
- Employ best scheduling methods through critical path analysis (CPM)
